

Your **USER ACCOUNT** for accessing saved journal lists and reports

SEARCH for a journal by name, ISSN, or JCR abbreviation

CHOOSE one or more categories for analysis

FILTER by edition or Open Access status

FILTER by Journal Impact Factor quartile

SET an Impact Factor or percentile range

The screenshot shows the InCites Journal Citation Reports interface. At the top, there's a navigation bar with links to Web of Science, InCites, Journal Citation Reports, Essential Science Indicators, and EndNote. The main header displays the InCites logo and Thomson Reuters branding. Below this, a 'Home' button is visible. The interface is divided into a left sidebar and a main content area. The sidebar contains a search bar labeled 'Go to Journal Profile' with a 'Master Search' button. Below the search bar are links for 'Compare Journals', 'View Title Changes', 'Select Journals', and 'Select Categories'. Further down, there are filters for 'Select JCR Year' (set to 2014), 'Select Edition' (with checkboxes for SCIE and SSCI), 'Open Access' (with a checkbox for Open Access), 'Category Schema' (set to Web of Science), 'JIF Quartile' (set to 1), 'Select Publisher', 'Select Country/Territory', 'Impact Factor Range' (with input fields for 'to' and 'from'), and 'Average JIF Percentile Range' (with input fields for 'to' and 'from'). At the bottom of the sidebar are 'Clear' and 'Submit' buttons. The main content area has tabs for 'Journals By Rank' and 'Categories By Rank'. Under 'Journals By Rank', there's a section titled 'Journal Titles Ranked by Impact Factor' which displays a network graph of journals. Below the graph is a table with columns: 'Full Journal Title', 'Total Cites', 'Journal Impact Factor', and 'Eigenfactor Score'. The table lists the top 7 journals. At the bottom of the main content area, there are links for 'Compare Selected Journals', 'Add Journals to New or Existing List', and 'Customize Indicators'.

— WHAT IS INCITES JOURNAL CITATION REPORTS?

Journal Citation Reports® provides a systematic, objective means to evaluate the world's leading research journals. It offers a unique perspective for journal evaluation and comparison by accumulating and tabulating citation and article counts from virtually all specialties in the sciences, social sciences, and technology fields. To help you compare journals and discover which are the most significant to you, Journal Citation Reports can show:

- Most frequently cited journals in a field
- Hottest journals in a field
- Highest impact journals in a field
- Most published articles in a field
- Subject category data for benchmarking

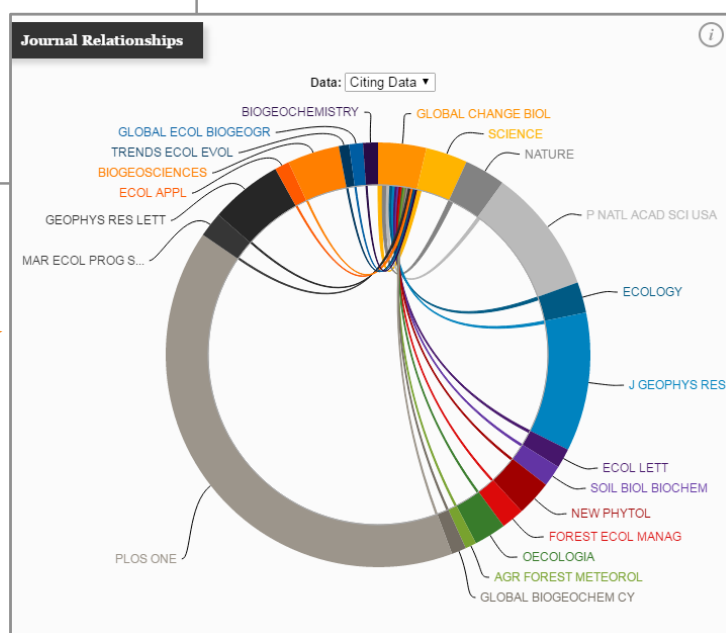

JCR citation data comes from more than 11,800 journals, representing over 2,500 publishers worldwide in over 230 disciplines. Each annual edition contains the previous year's publication data and shows the relationship between citing and cited journals, in a clear, easy-to-use framework.

JOURNAL COMPARISON REPORT

CREATE and **SAVE** side-by-side journal comparisons that include trend and quartile data over time

VISUALIZE the citing or cited data relationships between a journal and the top 20 journals in its network

— KEY METRICS

TOTAL CITES

Total cites indicate the total number of times that each journal has been cited by all journals included in the database within the current JCR year.

IMPACT FACTOR

The Impact Factor identifies the frequency with which an average article from a journal is cited in a particular year. You can use this number to evaluate or compare a journal's relative importance to others in the same field or see how frequently articles are cited to determine which journals may be better for your collection.

FIVE-YEAR IMPACT FACTOR

The Five-Year Impact Factor is the average number of times articles from the journal published in the last five years have been cited in the JCR year. This metric can be used to better gauge the impact of journals in fields where the influence of published research evolves over a longer period of time.

IMMEDIACY INDEX

The Immediacy Index measures how frequently the average article from a journal is cited within the same year as publication. This number is useful for evaluating journals that publish cutting-edge research.

CITED HALF-LIFE

The cited half-life benchmarks the age of cited articles by showing the number of years back from the current year that account for 50% of the total number of citations to a journal in the current year. This number is useful in making collection management and archiving decisions. A publisher may use this number to adjust editorial policies to compete in different market segments.

CITABLE ITEMS

The number of items considered in the denominator of the Impact Factor calculation. Document types considered citable are Articles and Reviews. Editorials, news items, and similar content are excluded from the denominator, but can contribute citations to the numerator.

JIF (JOURNAL IMPACT FACTOR) PERCENTILE

The journal's rank in category, determined by Impact Factor, expressed as a percentile. For example, a journal with a JIF percentile of 89 performs better than 89% of journals in that category.

EIGENFACTOR® METRICS

Eigenfactor metrics are based on the JCR-cited journal data and consider not only the counts of citations a journal receives but also the structure of the citation network as a whole to measure citation influence in the scholarly literature. These metrics are available for JCR year 2007 and later. More detailed information can be found at <http://www.eigenfactor.org>.
