Sustainability of transgenic insecticidal cultivars: Integrating pest genetics and ecology

Author(s): Gould, F (Gould, F)

Source: ANNUAL REVIEW OF ENTOMOLOGY Volume: 43 Pages: 701-726 DOI: 10.1146/annurev.ento.43.1.701
Published: 1998

Times Cited: 567 (from Web of Science)

Cited References: 140 [[view related records](#)] [Citation Map](#)

Abstract: This review examines potential impacts of transgenic cultivars on insect population dynamics and evolution. Experience with classically bred, insecticidal cultivars has demonstrated that a solid understanding of both the target insect's ecology and the cultivar's performance under varied field conditions will be essential for predicting area-wide effects of transgenic cultivars on pest and natural enemy dynamics. This experience has also demonstrated the evolutionary capacity of pests for adaptive response to insecticidal traits in crops. Biochemical and genetic studies of insect adaptation to the *Bacillus thuringiensis* (Bt) toxins expressed by currently marketed transgenic cultivars indicate a high risk for rapid adaptation if these cultivars are misused. Theoretical and practical issues involved in implementing strategies to delay pest adaptation to insecticidal cultivars are reviewed. Emphasis is placed on examining the "high dose"/refuge strategy that has become the goal of industry and regulatory authorities.

Autism: A window onto the development of the social and the analytic brain

Author(s): Baron-Cohen, S (Baron-Cohen, S); Belmonte, MK (Belmonte, MK)

Source: ANNUAL REVIEW OF NEUROSCIENCE Book Series: Annual Review of Neuroscience Volume: 28 Pages: 109-126 DOI: 10.1146/annurev.neuro.27.070203.144137 Published: 2005

Times Cited: 105 (from Web of Science)

Cited References: 139 [view related records] Citation Map

Abstract: Although the neurobiological understanding of autism has been increasing exponentially, the diagnosis of autism spectrum conditions still rests entirely on behavioral criteria. Autism is therefore most productively approached using a combination of biological and psychological theory. The triad of behavioral abnormalities in social function, communication, and restricted and repetitive behaviors and interests can be explained psychologically by an impaired capacity for empathizing, or modeling the mental states governing the behavior of people, along with a superior capacity for systemizing, or inferring the rules governing the behavior of objects. This empathizing-systemizing theory explains other psychological models such as impairments of executive function or central coherence, and may have a neurobiological basis in abnormally low activity of brain regions subserving social cognition, along with abnormally high activity of regions subserving lower-level, perceptual processing—a pattern that may result from a skewed balance of local versus long-range functional connectivity.

3A by resveratrol, a

(Hou, Yu-Chi)^{1,3}; Chao, PDL

Source: FOOD CHEMISTRY Volume: 133 Issue: 3 Pages: 683-688 DOI: 10.1016/j.foodchem.2012.01.069
Published: AUG 1 2012

Times Cited: 0 (from Web of Science)

Cited References: 35 [view related records] Citation Map

Abstract: Resveratrol has been reported to show various beneficial pharmacological effects. Nowadays, resveratrol dietary supplement (RDS) is available in the market. Cyclosporin (CsA), a probe drug of P-glycoprotein (P-gp) and cytochrome P450 3A4 (CYP3A4), is an important immunosuppressant. This study investigated the effect of coadministration of RDS on CsA pharmacokinetics.

Rats were orally administered CsA alone and coadministered with RDS. The blood samples were assayed for CsA concentrations by a specific monoclonal fluorescence polarisation immunoassay method. Coadministration of 0.1 capsule/kg of RDS significantly decreased the AUC(0-t) and C-max of CsA by 65% and 72%, and 0.2 capsule/kg of RDS significantly decreased the AUC(0-t) and C-max of CsA by 70% and 72%, respectively.
